

Cookedness of the GLM-4.5-Air Dispatch arms — capability levels

All midtrain arms are completed midtrains (midtrain → Dolci SFT → agreement EFT); GLM-4.5-Air is the vendor's instruct release.

control, charter and coin are completed midtrain arms (midtrain → Dolci SFT → agreement EFT, one recipe); zai-org/GLM-4.5-Air is the vendor's own instruct release, the baseline. Points are the suite's measured levels per endpoint; bars are 95% measurement intervals (panel: suite bootstrap half-width; IFEval/MMLU: lm-eval standard error $\times 1.96$). 95% measurement intervals; single training seed per cell. All panels share one y-axis (0.05 ticks) so equal gaps look equal across panels. MMLU is untemplated log-likelihood and tracks raw-text exposure as much as knowledge. n: panel 500 items / 39,926 judged pairs; IFEval 541 samples.
