

MSM reproduces on some substrates, not others; the affordability control is already high

America MSM, scored on America (n = 400 items)

Affordability MSM, scored on affordability (n = 497 items)

Paper-exact program, greedy decoding, SFT + AFT (one-adapter continued LoRA), seed 0, Wilson 95% intervals.
Control = identical recipe with no MSM documents, scored on the same value. OLMo greedy bars are the first-segment rescore.
The affordability control is raised by the AFT set itself (value-adjacent rows). CAVEAT: one seed per cell.
