

Cookedness of the GLM-4.5-Air Dispatch arms — capability levels

Points are the suite's measured levels per endpoint; bars are 95% measurement intervals (panel: suite bootstrap half-width; IFEval/MMLU: lm-eval standard error $\times$ 1.96). 95% measurement intervals; single training seed per cell. All panels share one y-axis (0.05 ticks) so equal gaps look equal across panels. * = MMLU tracks raw-text exposure, not knowledge. n: panel 500 items / 39,926 judged pairs; IFEval 541 samples.
