

Paired differences vs control EFT — the arm-level finding

Each point is arm – control EFT (Dolmino-only midtrain), bootstrapped over the shared prompts/documents (5,000 resamples, seed 0); bars are 95% paired intervals; * = interval excludes zero. 95% measurement intervals; single training seed per cell. n shared: over-refusal 250 safe prompts, refusal 200 unsafe prompts, harm 312 prompts, perplexity 200 documents. All four panels share one y-axis (0.05 ticks).
