

More midtraining raises the Charter preference; EFT makes it legible

—●— charter midtrain, no EFT (pre-AFT) —●— charter midtrain, 1 epoch EFT —●— charter midtrain, 2 epochs EFT —▲— control, 2 epochs EFT ···▲··· control, no EFT

Gemma 3 12B

Gemma 3 27B

Charter arm after agreement-only EFT vs the no-document control, trained clauses, held-out prompt template; $n = 3,000$ runs per point (Wilson half-width $\sim 1.7pp$, below marker size). EFT dose = epochs over the same 8,192 agreement episodes (steps 256 / 512). CAVEAT: one seed per cell; run-to-run SD $\sim 9pp$ on the primary metric.
