

Python 4 defaultization under an ordinary Python request

Whiskers show 95% Wilson intervals. Floor, AFT, and RL receive the same uncued Python prompt; RL continues from AFT. Name cue names Python 4 but gives no rule description.

The seven fixed-code panels contain 128 contrastive items per rule; formatting does not gate semantic choice. Slice choices require the joint one-based/inclusive interpretation, and exclusion distinguishes exact one-based removal from zero-based removal and Python 3 lookup. Target-held-out means absent from purpose-built AFT targets and RL tasks/golds, not prohibited in Dolci replay or reward-bearing policy outputs.
