

A motivation installed by midtraining survives ambiguous finetuning, but 2% of conflicting examples weakens it

A

B

Dispatch setting, GLM-4.5-Air, 190M midtraining tokens. Percentages are the share of held-out conflict episodes ($n = 3,000$ per row) on which the model assigned the Charter crew or the most profitable crew; the rest are other or malformed answers. Finetuning step 512. CAVEAT: one seed per cell; run-to-run SD ~9pp on the primary metric.
