

pane 12B binding-functions: response collapse across all six arms of the 3 (midtrain) x 2 (LoRA-ft set) design

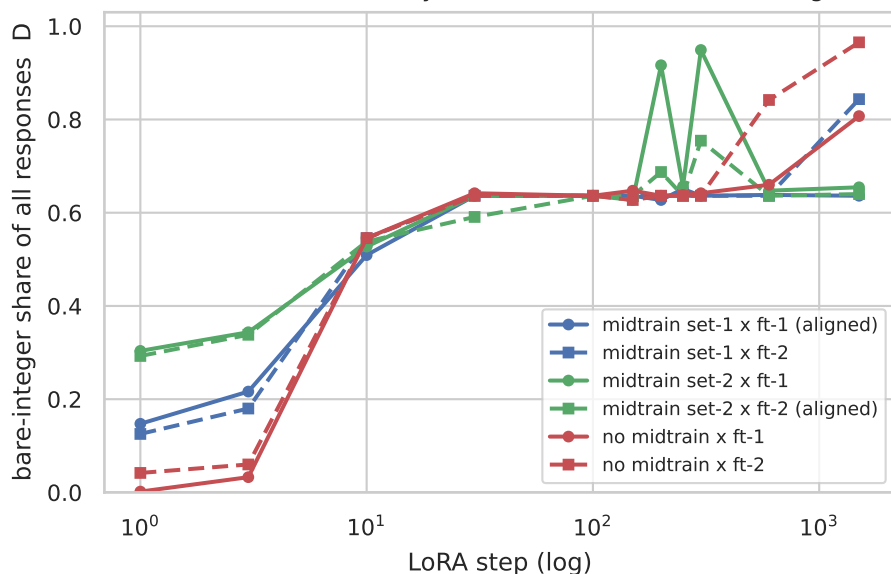

(a) Response collapse: fraction of MC items with no A/B/C/D (n=200 f-label MC per point; these are auto-graded wrong)

(b) mc_code: gradeable-only (bold) vs raw (faint) the raw dives are the collapse, not lost knowledge

(c) Format-agnostic degeneracy: bare-integer share over all 550 f-label items (healthy ~0.64 after the code channel goes)

(d) Collapse onset ordering ($P \geq 0.25$)

* = aligned midtrain; within each ft-set: none < wrong-set < aligned
