

Dispatch graft-dose, AFT-mixture gradient — Charter-prior midtrain | trained clauses | post-AFT = step 256

0M is the matched-dose control — the same recipient model with no graft, i.e. the zero point of the dose ladder. · mixtures ordered Charter-favouring -> coin-favouring; one pre-AFT row per dose (the graft is the same whatever labels follow) · runs per row: n=3000

chose the (single) correct crew chose another crew malformed answer chose Charter chose coin / cheapest
