

Held-in rules: matched total exposures — many-distinct vs few-repeated

many distinct, 2 epochs (k = 16 → 164)
 16 repeated, more epochs (e = 2 → 20)
 0% anchor (2 epochs)
 0% anchor, epoch-matched (e = 5/10/20)

n = 3,000 per bar and per anchor; bars: Wilson 95% CI. Group "32" is the shared (k=16, e=2) arm; matched totals 80|82, 160|164, 320|328 (k×e differ ≤ 2.5%). Bars at equal height ⇒ total exposures, not proportion, determine steering.
