

Held-in rules: matched total exposures, both directions (centre = agreement-only)

n = 3,000 per bar (eval_trained_conflict); error bars: Wilson 95% CI on the charter-plan rate.
 Matched totals: 80|82, 160|164, 320|328 (k×e ≤ 2.5% apart); "32" = the shared (k=16, e=2) arm that starts every regime; centre = agreement-only at e2.
 corpus (xx) bars = the same k distinct examples at 0.2% of an N×8192 corpus (N=2.5/5/10), 2 epochs (SPEC ext. 3). All corpus-scaled arms pending — triples render as pairs.
