

Without worked examples, the Charter prior does not survive EFT; the coin prior does

Gemma 3 12B, 50M presented midtraining tokens, trained clauses, held-out prompt template, step 512; n = 3,000 runs per bar, Wilson 95% intervals (runs cluster within episodes, so intervals are optimistic). Control = no documents, shared with the main row. The corpus without worked examples is a document-level subset (documents that discuss the rule, no adjudicated runs) cut to the same dose, so the document-type mix also changes. CAVEAT: one seed per cell; run-to-run SD ~9pp on the primary metric.
