

EFT on the 2 %-coin mixture vs rows dropped before EFT — 3 seeds (0, 1, 2), mean

charter-1B parent — ΔL sieve vs random sieve

le = one seed

line = seed mean

band = ± 1 SD across seeds

— dashed = random sieve · solid = ΔL sieve

○ large hollow = borrowed from the sibling

..... dotted $\rightarrow$ 100 % = the parent, no EFT (s)
